

It succeeded in bringing more motivated and higher educated young men and women into the military.

General Thurman was one of the earliest supporters of the Montgomery GI bill when many at the Pentagon and the White House opposed it. He saw immediately that it would help in recruiting and retaining topnotch young people, and history has proved us right on the value of the program.

He was also very proud of the fact that he commanded the U.S. invasion of Panama that ousted Gen. Manuel Noriega in 1989. It was the first major combat operation performed at night by American forces, a move which reduced U.S. casualties and helped set an example for future night-fighting tactics used in the Persian Gulf war.

I knew Max Thurman, and worked with him, for more than 20 years. I know firsthand how committed he was to the military life and to the country he loved so much. He was truly one of our best and brightest. We will miss our old friend.

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California [Mr. MCKEON] is recognized for 5 minutes.

[Mr. MCKEON addressed the House. His remarks will appear hereafter in the Extensions of Remarks.]

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Missouri [Mr. CLAY] is recognized for 5 minutes.

[Mr. CLAY addressed the House. His remarks will appear hereafter in the Extensions of Remarks.]

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan [Mr. SMITH] is recognized for 5 minutes.

[Mr. SMITH of Michigan addressed the House. His remarks will appear hereafter in the Extensions of Remarks.]

TEENAGE PREGNANCY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from North Carolina [Mrs. CLAYTON] is recognized for 5 minutes.

Mrs. CLAYTON. Mr. Speaker, our parents and grandparents have taught us that prevention is better than cure.

Unintended teenage pregnancies illustrate this dilemma.

Contrary to popular thinking, more than 9 out of 10 teenage pregnancies—96 percent—are unintended.

Every year, more than 1 million American teenage girls become pregnant—and, the vast majority of them do not intend this result.

If we had in place a more effective and comprehensive prevention program, in both the private and public sectors, greater than 90 percent of the teenage girls who have babies may not get pregnant in the first place.

If those girls did not get pregnant, we could save millions, perhaps billions, of

medicaid and other federal dollars. This is an important observation during our budget legislation.

The delivery of a baby and postnatal care to a pregnant teenager—who cannot afford the pregnancy—costs the Government now about \$8,400 each time.

Over the years, teenage pregnancies cost continues to rise, through other entitlement programs and other costs associated with these pregnancies that were not intended and were not prepared for properly. A range of prevention activities would cost far, far less than that amount.

The savings that could be experienced through a more effective prevention program could help avoid some of the cuts we are now postured to make. More important, effective prevention would save the teenagers productive life until that person is ready to become a parent. Mr. Speaker, I am sure you have heard that popular commercial that states, "Pay me now or pay me later."

On teenage pregnancies, it is better to pay now than to pay later.

There are effective programs, with proven track records, that reach about half of the girls who need help. With more effort, we can reach most or all of these girls. The proportion of sexually active adolescent women over age 15 increased substantially from the seventies to almost 50 percent in the early eighties.

Although data for the first half of the 1980's suggested a leveling off to 44 percent, the data for 1988 was more than 50 percent and indicates a resumption of the increase rate.

Available data for adolescent men over age 17 also shows a substantial increase in the proportion sexually active—up from 66 percent in the late seventies to almost 80 percent in the late eighties.

And, by 1992, the adolescent birth rate was more than 60 births per 1,000 adolescents over age 15. Out-of-wedlock childbearing has increased steadily and markedly among adolescents.

The birth rate for unmarried adolescents over age 15 increased from more than 22 births per 1,000 in 1970 to almost 45 births per 1,000 in 1992.

Moreover, in 1970, 30 percent of births to adolescents over age 15 were out of wedlock as compared to 70 percent in 1991.

The United States has one of the highest teenage pregnancy rates of any western industrialized nation.

These are unintended and preventable pregnancies—so why are we standing idly by?

I issue a challenge to all my colleagues. We must do more than legislate, legislate, legislate. We must reach out with a caring hand to our youth and their families. We must try to stop these unintended pregnancies. Prevention is the key. An ounce of prevention is worth a pound of cure.

REPUBLICANS ROLL BACK ENVIRONMENTAL GAINS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York [Mrs. LOWEY] is recognized for 5 minutes.

Mrs. LOWEY. Mr. Speaker, I rise this evening in very strong opposition to Speaker GINGRICH's and the Congressional majority's attack on clean water, clean air, and our national parks.

No one who has followed the legislative activities of this Chamber over the last several months can deny that there has been—and continues to be—a concerted effort underway to roll back a host of laws that protect our natural resources and the environmental health and safety of the American people.

Already this body has voted to gut the Clean Water Act, to cut hundreds of millions of dollars from grants to local communities that help keep drinking water safe and beaches swimmable, to allow oil and gas drilling in the pristine wilderness of the Arctic National Wildlife Refuge—America's last frontier, to cut the Environmental Protection Agency's budget by 33%, including a 50% cut in enforcement activities and a 19% cut in the program that cleans up hazardous waste sites, to slash funding for land acquisition for national parks and wildlife refuges by 40%, to cut major wetlands habitat conservation programs by 24%, and terminate altogether the EPA's role in protecting wetlands, to accelerate timber sales and logging road construction in our national forests, including the Tongass, a vast temperate rain forest in southeastern Alaska, to cut by one-third the recovery program for the grey wolf in Yellowstone National Park, to repeal a key component of the California Desert Protection Act, to cut climate and global change research by 41%, and to terminate recovery research programs on whales and other marine mammals.

Thankfully, an attempt to sell off our national parks was defeated. But the list goes on and on.

This summer, the Republican majority voted in favor of seventeen special interest loopholes that would restrict the EPA from enforcing programs important to public health, such as controls on airborne emissions of benzene, dioxin, and other cancer-causing pollutants from oil refineries, cement kilns, and paper plants.

When the American people found out about these outrageous provisions, it did not take long for some Members to do an about-face. Most of those special interest riders have been removed. However, we are still faced with a bill that imposes deep cuts in the EPA.

Mr. Speaker, the American people want to know what is next on the Republicans' environmental chopping block. Well, the Endangered Species Act, for one, is on life-support in critical condition. Apparently some feel that because the bald eagle is no longer
